BABYPOM WHITEPAPER
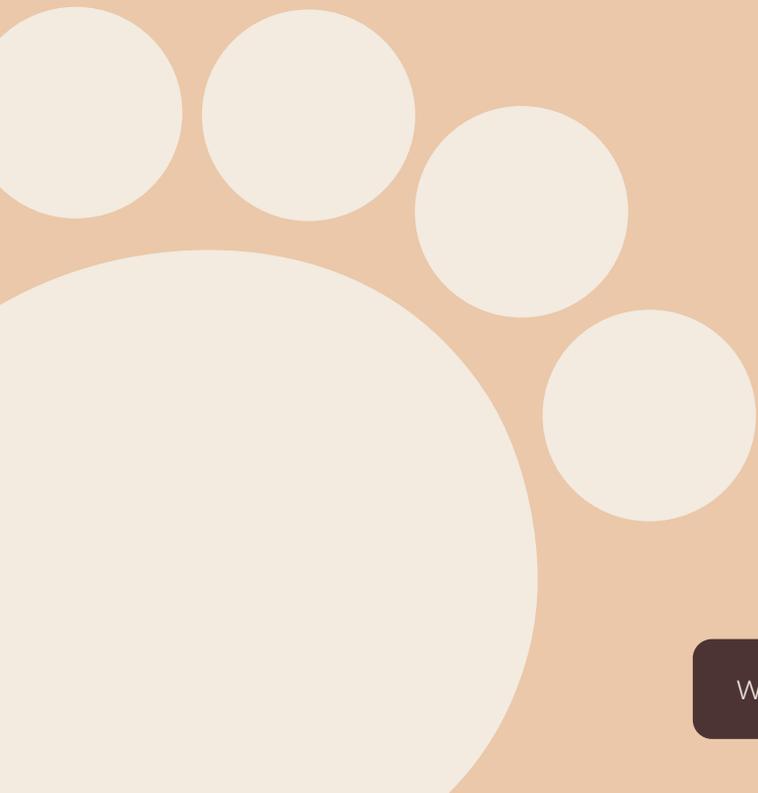

A community-driven charity and reward token set to bridge the gap between Ethereum and Binance Smart Chain

01

Objective

Today there are countless opportunities to jump into a new token, join a new breed of dog coin, or choose where you give your money to charity. Yet with every one of the 1000's of new projects launching on Binance Smart Chain everyday there is one thing in common with every one of them.

Beyond our extensive charity work across the country, giving to the homeless, veterans, pet shelters, adoption agencies and shelters for the abused. Additionally, we also support small business owners and aspiring entrepreneurs.

Our primary focus is building out a platform for users to trade tokens back and forth between the Ethereum network and the Binance Smart Chain network.

In short this will allow for easier access to funds that millions of crypto users normally would need to pay exorbitant fees to access or utilize a specialized platform to retrieve their Ether or BNB with.

By building an in-house solution to this common problem, we will be opening an additional swim-lane for crypto enthusiasts around the world to swap ERC20 tokens for their BEP20 token equivalents.

02

Key Deliverables

Immutable Smart Contracts

Transparent and Communicative Team

Secure Bridge API with Pen Testing

Automated Liquidity

Strong Core Team

03

Tokenomics

Rather than leaving anything to chance, BabyPom has opted to time lock liquidity in a smart contract through Unicrypt.network for **255 Years** and time lock ownership equity wallets for **6 months**. This will effectively negate the possibility of a rug pull by the dev team by stopping the ability to remove liquidity at any time. This lock contract is publicly viewable on Unicrypt.network.

2% Auto Liquidity

This buy/sell tax funds the liquidity pool to ensure continued stimulation of BabyPom's tokenomics.

2% Charity

This buy/sell tax funds the public charity wallet used for all philanthropic projects the BabyPom community supports.

4% Self Reflections

This buy/sell tax funds the growth of BabyPom at each phase by directly compensating the community for sharing BabyPom with others within the global community of crypto enthusiasts.

10% Operations

This buy/sell tax is used to fund operations and the development of Babypom's infrastructure. Proper funding of Baby-Pom's strategies ensures the greatest positive outcome for it's ongoing projects, the coin holders, and the philanthropic endeavors the BabyPom community supports.

Corporate Equity

Equity Wallets will be time-locked for a minimum of 6 months. They will be split between the following core team members.

14.5%	85.5%
TEAM	PUBLIC

3.5%	2.6%	1.7%
CEO	CTO	CMO

1.3%	1.3%	1%
COO	LOGISTICS	MUSE-ADVISOR

0.7%	1.3%	1.1%
CD	PR	CIO

ILO Breakdown

After ILO creation there will be an initial lock of 60% of the available supply. This will occur before the ILO starts. After the successful completion of the ILO and pair creation, the equity wallets will be divided up amongst the corporate entities and locked away as well.

The remaining portion of the deployer wallet will be burned once everything has been successfully divided up and locked away and the token has been launched on pancakeswap.

In addition to these locks as a gesture, everyone on the team signed a contract agreeing to lock the tokens as a unanimous decision. This way there are no loose ends, no unlocked team wallets and no chance for foul play

15 trillion BabyPom will be offered for pre-launch, which is 15% of the total supply. Of the raised BNB capital 90% will go towards liquidity and 100% will be locked for 266 years.

The ILO will have a soft cap of 400 BNB and a hard cap of 800 BNB. The limit for individual participants will be 1.5 BNB. This will set the price token during the ILO to be 1 BNB = 18.75 billion BabyPom. Since this is a fair launch the price per BNB will not be increased upon pair creation.

04

KEY DATA
POINTS

Key Data Points

Looking at the market utilization between the two chains it is easy to see the need for a bridge to gap the market usage between the two protocols. Below is a graph of the current market utilization of both Ethereum and Binance. With over 5x the usage, Ethereum has the groundwork laid already to allow for traffic to flow back and forth consistently across our bridge.

8 Billion Meal Shortage in America

There is a current predicted shortage in the USA for up to 8 billion meals due to COVID19 alone. We hope to be able to offset this number even if only by a fraction from the charity donations in the charity wallet as well as revenue from the bridge being built to support the token.

Along with meal programs, we will have numerous other welfare and charitable efforts to include homeless clothing drives, veteran donation efforts, small business fundraisers, animal shelter donations, women's shelter donations and the list goes on.

Time to stop looking to the moon and start focusing on making the world a better place.

BabyPom is here to focus on charitable outreach in communities near you and bridge the gap between two of the largest decentralized chains in crypto today!

05

Conclusion

The decentralized space is a chaotic realm to navigate, and there can be a lot of shady players. That is why here at Baby Pomeranian it is our primary goal to foster a sense of community and engagement. We want to build a movement of people looking to go out into their individual communities and do good.

We have numerous ongoing campaigns in which we have boots on the ground and encourage people to come out and join us, interact with us and join in the fun of giving back and helping others!

The bridge allows us to grow and scale our project to new heights and as the beta, alpha and eventually production
versions of this product roll out we will again want as much community involvement and engagement as possible to
ensure we are delivering the highest quality products to the marketplace as possible.

Thank you so much for coming on this journey with us and remember

Together, We Can Make Difference.
